Ethixbase360 Cyber TPRM Platform, powered by S-RM

If your vendor is vulnerable, so are you: how to protect your business from cyber-attacks on your third parties

Cyberattacks are on the rise and the more third parties you have, the bigger your risk

With almost half of organisations predicted to have experienced attacks on their digital supply chains by 2025*, and the global cost of a data breach averaging USD 4.45 million**, businesses need a cyber third-party risk management solution to protect both themselves and their third parties from attacks.

Your business may be well protected but what about your suppliers? How could a cyber breach of one of your third parties impact you?

- ✓ Your operations could be at risk if their ability to supply is affected
- ✓ You may lose access to shared APIs and data
- ✓ Your time, client relationships and revenue could be compromised

Ethixbase360 and S-RM: Platform + People

Ethixbase360 Cyber TPRM Platform, powered by S-RM, addresses the risk exposures created by any vulnerabilities of your third parties.

Initial Risk Assessment:
- ✓ Insight
- ✓ Prioritization
- ✓ Action

Continuous Monitoring → Detect → Assess → Prioritize

Our initial risk assessment delivers rapid insight, enabling immediate prioritization and action. Ethixbase360's technology then provides automated workflows and continuous monitoring combined with S-RM's industry-leading incident response and advisory capabilities to deliver an unrivalled end-to-end "detect, assess, prioritize " approach to managing third party cyber risk. All the more important at a time when organisations' value chains are growing in complexity and size, and when many firms are looking to centralise and consolidate their approach to managing risk and the third parties with which they do business.

> Ethixbase360 and S-RM give you the platform and the people: All the benefits of a comprehensive single solution, backed by deep sector expertise.
